

### \*All doses assume normal renal and hepatic function- refer to Renal Drug Database or SPC/BNF for dosing adjustments PO doses **Antibiotic** IV doses

1gram 8 hrly No IV option 960mg 12 hrly No IV option

2grams 6 hrly 500mg 8 hrly 400mg 8 hrly No IV option

Consider co-trimoxazole

50mg 6hrly (M/R if compliance issue) 200mg 12 hourly

See CDI guideline in NHSD&G

Antimicrobial handbook. Treat

before lab confirmation if high

CDI screen negative

Gastroenteritis

clinical suspicion. Discontinue if

Confirm travel history/ other risk

factors. Send sample. Antibiotics

not normally required and may

0157.Consider viral causes. If

Important considerations

Gentamicin Avoid in myasthenia gravis and decompensated liver disease Patient Information Leaflet required on prescription Quinolones Can prolong QTC and lower seizure threshold

Reduced absoption with iron, calcium, magnesium, aluminium, zinc Doxycycyline Reduced absorption with iron, calcium, magnesium, aluminium, zinc

Can prolong QTC; P450 inhibitor- check interactions

Nitrofurantoin Do not use if Creatinine Clearance (CrCl) <30mls/min

Reviewed by Antimicrobia Management Team V8.2 Approved by AMT/ ADTC Updated: 09/10/2025 Next review: 02/06/2027

### **Uncertain if LRTI or UTI**

Send MSSU, sputum & viral throat swab. Do NOT prescribe Co-amoxiclav No sepsis: PO Amoxicillin AND PO Nitrofurantoin. If penicillin allergic: PO Co-trimoxazole Sepsis: IV Amoxicillin AND IV Gentamicin. If penicillin allergic: IV Cotrimoxazole +/- IV Gentamicin

Clarify diagnosis at 48 hours. Duration if remains uncertain: 5 days

### Infective Exacerbation COPD

Antibiotic only if purulent sputum. Dual antibiotic therapy not recommended & increases risk of harm

 PO Doxycyline OR PO Amoxicillin (1st line choices) OR PO Clarithromycin (2<sup>nd</sup> choice) Duration: 5 days

### **Community Acquired Pneumonia (CAP)**

Non-severe CAP (CURB65 score ≤2 and no sepsis)

• PO Amoxicilin; If penicillin allergic: • PO Doxycycline

### Severe CAP (CURB score≥ 3 or more or any CURB65 score with sepsis)

• IV Amoxicillin OR IV Co-amoxiclay (If treated previously or adverse prognostic features)

### **AND ADD ATYPICAL COVER**

 PO Doxycycline (as 1st choice) OR PO Clarithromycin (as 2<sup>nc</sup> choice; IV if absorption/ swallow issues.

Consider covering for atypicals for returning travellers or bird/ animal exposure

If penicllin allergic: • PO Levofloxacin (will cover atypicals) Duration: 5 days

### Confirmed Legionella Pneumonia

• PO Levofloxacin. Duration: 10-14 days (longer duration may be required in severe disease or immunocompromised)

## **Hospital Acquired Pneumonia**

Early onset HAP (≤4 days from admission)

Treat as CAP

## Non-severe late onset HAP (≥ 5 days from admission)

PO Doxycyline or

PO Co-trimoxazole

Severe late onset HAP (> 5 days from admission) • IV Co-trimoxazole AND

IV Gentamicin Duration: 5 days

**Tonsillitis-** *Most cases are viral* and do no require antibiotics

## Tonsillitis without sepsis:

PO Penicillin V If penicillin allergic: PO Clarithromycin

Duration: 10 days (Penicillin V); 5 days (Clarithromycin)

## Tonsillitis with sepsis/ Quinsy (drain abscess immediately):

IV Benzylpenicillin AND IV Clindamycin If penicillin allergic:

IV Vancomycin AND IV Clindamycin

Duration: 10 days

ADD IV/PO\* Metronidazole Duration: 5 days

# Urinary Tinfection

If penicillin allergic: • PO Doxycycline OR

• PO Co-trimoxazole Duration: 5-7 days

Mild/ Moderate Cellulitis

## Severe Cellulitis/ Erysipelas

For upper limb cellulitis, seek orthopaedic advice

### **Consider OPAT**

 consult local management pathway

### For in patient management:

• IV Flucloxacillin

If penicillin allergic: • IV Vancomycin

If rapidly progressing: ADD IV Clindamycin

Duration:7-10 days, depending on clinical progress

Consider BBV transmission,

tetanus & rabies risk Consider surgical review See full document on links to risk stratification when prophylaxis indicated

Assess HIV and hepatitis risk-prophylaxis as required

## Non-severe:

• PO Co-amoxiclav

### If penicillin allergic: PO Doxycycline AND PO Metronidazole

Treatment: 5 days Prophylaxis: 3 days

If penicillin allergic:

• IV Vancomycin AND PO Metronidazole AND PO Ciprofloxacin

Treatment: 7 days

## Facial cellulitis

IV Flucloxacillin AND IV Clindamycin

### If penicillin allergic: • IV Vancomycin AND IV Clindamycin

Duration: 7 days

## **Suspected Necrotising** Clostrioides difficile infection

• PO Flucloxacillin

URGENT surgical/ specialist review. Urgent debridement/ exploration

commence empirical treatment

• IV Piperacillin/ Tazobactam (1st dosebolus)

IV Clindamycin AND **IV** Gentamicin

### If penicillin allergic: **TWO IV LINES REQUIRED**

• IV Vancomycin AND IV Clindamycin AND IV Gentamicin AND IV Metronidazole

Rationalise 48 to 72 hours of starting antibiotics

## Surgical wound

### If penicillin allergic/MRSA suspected:

 PO Doxycycline (If IV required give *IV Co-trimoxazole)* 

IV Flucloxacillin AND PO\* Metronidazole (\*IV- if absorption/ swallow issues AND IV Gentamicin

## and contaminated:

IV Co-trimoxazole AND PO Metronidazole/IV\*

ADD IV Gentamicin if Duration: 5-7 days

Seek immediate specialist advice from Ophthalmology and ENT Consider CT imaging & drainage

## IV Ceftriaxone If penicillin allergic:

• IV Vancomycin AND PO Ciprofloxacin

## Duration: 10-14 days

## 500mg-1g 8 hrly 960mg 12 hrly 200mg stat then 100mg 12 hrly 1gram 6 hrly

## Bone and joint infection **Gastrointestinal infection**

metal work or recent surgery. Ensure joint aspiration prior to antibiotics

### • IV Flucloxacillin

If penicillin allergic or MRSA:

## sickle cell disease: ADD IV Gentamcicn

Discuss with infection specialist/ OPAT

Duration: Discuss with infection specialist

## Osteomyelitis

• Take blood cultures (2 sets) prior to starting treatment. Discuss with infection specialist

## Acute diabetic foot infection/ osteomyelitis

Assess ulcer size, probes to bone, neuropathy,PVD disease, MRSA risk. Notify Diabetologist. Send culture & review previous microbiology. Refer to full guidance to determine severity

• PO Doxycycline

## **Moderate or Severe infection:**

IV Flucloxacillin +/- see below

### If penicillin allergic:

- infection (e.g. recent antibiotics, sepsis, haemodynamic compromise, ischaemic limb, necrosis, gas
- If high risk for anaerobic infections (e.g. ischaemic limb/ necrosis/ gas forming): ADD PO Metronidazole (IV- if absorption/ swallow issues)
- If CrCl<20mls/min AND</li> combination therapy required: IV Piperacillin-Tazobactam
- CrCl<20mls/min: Discuss with infection specialist

• If penicillin allergic with

# Central nervous system infection

giving antibiotics

### **Bacterial meningitis**

• IV Ceftriaxone 2g BD

If severe penicillin allergic: • IV Meropenem 2g TDS

ADD IV Dexamethasone 10mg\* 6 hourly *prescribe \*3mls of* 3.3mg/ml dexamethasone base on HEPMA

### If Listeria suspected, >55yrs, immunocompromised, alcohol excess, liver disease

· ADD IV Amoxicillin 2g 4hrly

## If penicillin allergic: · ADD IV Co-trimoxazole

**Duration: Discuss with infection** 

## Viral meningitis

- Usually diagnosed after empirical management and exclusion of bacterial meningitis
- · Stop antiviral if enteroviral or mumps meningitis is diagnosed
- Continuation of antiviral for HSV/VZV should be discussed with infection specialist

reduced level consciousness in suspected CNS infection.

• IV Aciclovir 10mg/kg 8 hrly (Use Adjusted body weight if BMI ≥30kg/m2)

 Discuss with infection specialist if suspecting HSV

Duration: 10-21 days

## **Endocarditis**

prior to antibiotics (spread over 48 hours if stable) Discuss with infection specialist

## mmunocompromised

patients

## **Neutropenic sepsis**

Obtain 2 sets of blood cultures. Consider infection source and review previous

**D&G Antimicrobial** Handbook

systems, perform CXR and consider other imaging and laboratory investigation Review previous microbiology results

## IV Amoxicillin AND

If Penicillin allergic:

Duration: depends on source

## Peripheral line infection

Severe infected PVC exit site (+/- sepsis):

Duration: Discuss with nfection specialist

Guidance in NHS D&G

Refer to SAPG SAB Fiull

Duration: minimum 14 days of IV, total duration but will depend on source/ site of

### systemically unwell, discuss with infection specialist AND

Intra-abdominal infections IV Amoxicillin AND IV Gentamicin AND

be deleterious in E.Coli

PO\* Metronidazole (\*PO has about 95-100% bioavailability; IV- if absorption/ swallow issues)

## If CrCl<20mls/min:

If penicillin allergic: • IV Vancomycin AND

• IV Piperacillin-Tazobactam

## PO Metronidazole/ IV\* If penicillin allergy and

IV Gentamicin AND

CrCl<20mls/min • PO Ciprofloxacin/ IV\* AND PO Metronidazole/ IV\*

Duration: 5 days (assuming

source control) \*Biliary tract infection- treatment as above except metronidazole not

peritonitis If not receiving co-trimoxazole

• IV/ PO Co-trimoxazole If receiving co-trimoxazole

• IV Piperacillin- Tazobactam

If penicillin allergic: •PO Levofloxacin (\*IV- only if absorption/ swallow issues)

Duration: 5-7 days

## **Decompensated chronic liver** disease with sepsis unknown

• PO Levofloxacin/ IV\*

## Mild Infection:

If penicillin allergic:

- If high risk for Gram negative

Duration: 7-14 days (if osteomyelitis, discuss duration with infection specialist)

## **Check LP contraindications on** full document

## Obtain blood culture before

## IV Gentamicin

**REMOVE LINE** If localised infection at PVC

# PO Doxycyline

## IV Vancomycin Central line infection

organism

**Antimicrobial Handbook** 

infection

## **Acute prostatitis** • PO Trimethoprim OR

PO Ciprofloxacin Duration: 14-28 days **Epididymo-orchitis** 

• ≥35yrs: PO Ofloxacin (1<sup>st</sup> choice) OR PO Co-amoxiclav (2<sup>nd</sup> choice)

Sexual health screen

recommended

• <35yrs: PO Doxycycline

Duration: 14 days

# Skin and soft tissue infection

Amoxicillin

Co-trimoxazole

Doxycycline

Flucloxacillin

Metronidazole

Nitrofurantoin

Trimethoprim

Cefalexin

## **Fasciitis** This is an emergency orthopaedic/infection

maybe required Take blood culture and

## In order of administration

## Non-contaminated: • IV Flucloxacillin

# If contaminated:

If penicillin allergic/ MRSA

Pre Septal/ Orbital Cellulitis This is an emergency.

• IV Flucloxacillin

1gram 8 hrly

## Septic arthritis Urgent orthopedic referral if underlying

## **Native joint:**

## • IV Vancomycin If high risk for gram negative infection e.g. immunocompromised, recurrent UTI or

## **Prosthetic joint:**

specialist

• IV Flucloxacillin

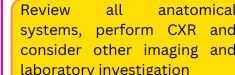

## Duration: 5-7 days

• IV Vancomycin +/- see below

# **forming:** ADD IV Gentamicin

## **Sepsis of Unknown Origin**

IV Vancomycin AND **IV** Gentamicin

site: PO Flucloxacillin OR

## IV Flucloxacillin OR

Discuss with infection specialist. Treatment depends on underlying

Discuss with infection specialist

### infection specialist Regardless of time of admission If severely ill:

**Aspiration pneumonia** 

Aspiration pneumonitis does

not require antibiotic unless

secondary infection arises

later in lungs. Prophylatic

antibiotic are not

recommended

If occur ≤4 days from

admission (CAP):

• IV/PO\* Amoxicillin OR

• PO\* Doxycycline OR

•IV/PO\*Clarithromycin

If occur≥ 5 days from

admission (HAP):

PO\* Doxycycline OR

V/PO\*Co-trimoxazole

(PO\*if swallow safe)

ADD IV Gentamicin

Only if at high risk of anaerobic (e.g. obvious dental/periodontal disease, putrid sputum, or suspected lung abscess/ empyema):

## Lower UTI (males &

non-pregnant females) • PO Trimethoprim OR PO Nitrofurantoin OR

PO Ciprofloxacin

Duration: 3 days (females)

7 days (males)

Upper UTI/ pyelonephritis

(males and non-pregnant

females)

Without sepsis:

PO Trimethoprim

With sepsis:

• IV Gentamicin up to 72hrs,

then consider IVOST\*\*

If CrCl<20mls/min:

# may be sufficient to cover up to

72hrs- follow gentamicin guidance

<20mls/min, then consider IVOST\*\*

Duration: 7 days

**Catheter-associated UTI** 

Without sepsis:

Stat IV Gentamicin prior to

catheter removal, then IVOST\*\*

Duration: 3 days (females)

7 days (males)

With sepsis:

• IV Gentamicin up to 72hrs,

then consider IVOST\*\*

Change catheter after 1st dose

If CrCl<20mls/min:

Single dose IV Gentamicin

# may be sufficient to cover up to

72hrs-follow gentamicin guidance

<20mls/min, then consider IVOST\*\*

Duration: 7 days

\*\*Refer to <u>IVOST policy</u>.

If IVOST not suitable, refer to

'IV Gentamicin: What to do after

72 hours' policy OR discuss with

Single dose IV Gentamicin#

### • PO Cefalexin If severe penicillin allergy and CrCl<20mls/min:

**Animal bites** 

**Human bites** 

## Severe: • IV Co-amoxiclav

# If intracranial extension:

Duration: 7 days

## routinely required unless severe Spontaneous bacteria

prophylaxis

prophylaxis

## • IV Piperacillin-Tazobactam If penicillin allergic:

30mg/kg 6hrly

# and manage symptomatically

Viral encephalitis Consider if confusion or
